# SECTION 078100 - APPLIED FIRE PROTECTION

2	GENERAL
3	SUMMARY
4	Provide the Work of this Section in accordance with requirements of the Contract Documents.
5	This Section includes, but is not limited to:
6 7 8	Sprayed fire-resistive materials, both concealed and exposed to view High Density sprayed fire resistive materials for exterior exposed and exposed interior applications subject to abuse.
9	Related Requirements:
10 11 12 13 14 15 16 17	Division 05 Sections "Structural Steel Framing", "Steel Joists", "Steel Floor Deck", And "Steel Roof Deck" for surface conditions required for structural steel receiving fireproofing.  Division 07 Section "Thermal Insulation" for fire-safing insulation.  Division 07 Section "Fluid Applied Thermal Insulation" for liquid insulating coating applied over applied fireproofed steel beams for a length of not less than 18 inches inside building envelope.  Division 07 Section "Intumescent Fire Protection" for mastic and intumescent fire-resistive coatings.  Division 07 Section "Penetration Firestopping" for fire-resistance-rated firestopping systems.  Division 07 Section "Fire-Resistive Joint Systems" for fire-resistance-rated joint systems.
18	DEFINITIONS
19	SFRM: Sprayed fire-resistive materials.
20 21	Cementitious: Sprayed fire-resistive material using cementitious binders and adhesive materials complying with ASTM E1513.
22 23 24 25	Concealed: Fire-resistive materials applied to surfaces that are concealed from view behind other construction when the Work is completed and have not been defined as exposed. Concealed fire resistive materials may be accessible through suspended ceilings, which may be in elevator shafts and machine rooms, mechanical rooms, air-handling plenums, and structural steel encapsulated by wall construction.
26 27 28 29	Exposed: Fire-resistive materials applied to surfaces that are exposed to view when the Work is completed. It also includes applied fire resistive materials that are in exterior installations, or are in interior mechanical bulkheads, loading docks, garages, that exposed to abuse, and must withstand damage from equipment, or that are identified as exposed on Drawings.
30	PREINSTALLATION MEETINGS
31 32 33	Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to fireproofing including, but not limited to, the following:
34 35 36 37 38 39 40	Review products, exposure conditions, design ratings, restrained and unrestrained conditions, calculations, densities, thicknesses, bond strengths, and other performance requirements.  Review and finalize construction schedule and verify sequencing and coordination requirements.  Review weather predictions, ambient conditions, and proposed temporary protections for fireproofing during and after installation.  Review surface conditions and preparations or bare steel and steel with shop primers. Determine what repairs and preparations are required to ensure adequate bond.

41 42	Review field quality-control testing procedures including Special inspections, which are different than QC testing.
43	ACTION SUBMITTALS
44 45 46	Product Data: Submit manufacturer's product data for the following, showing compliance with performance requirements specified. Include manufacturer's technical data sheets, printed instructions, and specifications for handling, mixing, protection of adjacent surfaces, heating requirements, and cleanup:
47 48 49 50 51 52 53 54	Sprayed fire-resistive material. Substrate primers. Bonding agent. Metal lath. Reinforcing fabric. Reinforcing mesh. Sealer. Topcoat.
55	Sustainable Design Submittals:
56	Building Product Disclosure and Optimization - Sourcing of Raw Materials:
57 58 59 60 61 62	Leadership Extraction Practices  Extended Producer Responsibility (EPR): Submit documentation indicating that manufacturers have a take back or recycling program for the product purchased.  Recycled Content: For products having recycled content, indicate percentages by weight of post-consumer and pre-consumer recycled content.  Include statement indicating costs for each product having recycled content.
63 64 65	Sourcing of Raw Materials: For products that are required to comply with requirements for regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
66 67	Include statement indicating distance to Project, cost for each regional material and the fraction by weight that is considered regional.
68 69 70	Indoor Environmental Quality, Low Emitting Materials: Building Products must be tested and compliant with the California Department of Public-Health (CDPH) Standard Method V1.1-2010, using the applicable exposure scenario.
71 72 73 74 75	Adhesives: For wet applied on site products, submit printed statement showing compliance with the applicable chemical content requirements of SCAQMD Rule 1168, effective July 1, 2005 and rule amendment date of January 7, 2005.  Methylene Chloride and perchloroethylene may not be added to paints, coating, adhesive or sealants
76 77	Applied Fireproofing Schedule: Provide a schedule for structural elements proposed to receive spray-on fireproofing noting the following:
78 79 80	Locations and types of surface preparations required before applying applied fireproofing material. Extent of sprayed fire resistive material for each construction and fire resistive rating including the following:
81 82 83 84	Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies based on manufacturer's UL testing for each size and shape of structural framing required.  Hourly ratings and corresponding UL Standard No.
85 86	Designation of restrained and unrestrained conditions based on definitions in ASTM E119, Appendix X3 as determined by a qualified Professional Engineer.

87 88	Treatment of sprayed fire resistive material after application Locations of elements to receive sealer.
89	Shop Drawings: Structural framing plans or schedules, or both, indicating the following:
90 91	Locations and types of surface preparations required before applying fireproofing. Extent of fire protection for each construction and fire-resistance rating, including the following:
92 93 94 95 96	Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.  Minimum sprayed fire-resistive material thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.  Treatment of sprayed fire-resistive material after application.
97 98 99 100	Base all design designations on unrestrained members or submit designation of restrained and unrestrained conditions based on definitions in ASTM E119, Appendix X3 as determined by a Structural (Professional) Engineer licensed in the state of [New York] <enter state="">.  Treatment of sprayed fire resistive material after application</enter>
101 102 103	Samples: For each type of exposed sprayed fire resistive material and for each color and texture specified, 4 inches square in size. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.
104	INFORMATIONAL SUBMITTALS
105 106	Qualification Data: For [Installer] [manufacturer,][professional engineer,] [and] [testing agency]. Submit manufacturer's notification of acceptance of the entity performing the application work of this section.
107	Informational LEED Submittals:
108	Building Product Disclosure and Optimization - Sourcing of Raw Materials:
109 110 111 112 113	Raw Material Sources and Extraction Reporting: Submit Raw materials supplier corporate Sustainability Reports (CSRs); documenting responsible extraction; including extraction locations, long term ecologically responsible land use, commitment to reducing environmental harms from extraction and manufacturing processes, and a commitment to meeting applicable standards or programs that address responsible sourcing criteria
114 115 116	Submit manufacturers' self-declared reports Submit third party verified corporate sustainability reports (CSR) using one of the following frameworks"
117 118 119 120 121 122	Global Reporting Initiative (GRI) Sustainability Report Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises UN Global Compact ISO 26000 USGBC approved program.
123	Building Product Disclosure and Optimization - Material Ingredients
124 125	Material Ingredient Optimization: Submit manufacturer's Environmental Product Declaration (EPD) and at least one of the following:
126 127 128 129 130 131	GreenScreen V1.2 Benchmark: Third party report prepared by a licensed GreenScreen List Translator, or a full GreenScreen Assessment.  Cradle to Cradle: Manufacturer's published literature for the product bearing the Cradle to Cradle logo.  International Alternative Compliance Path - REACH Optimization  Declare: Manufacturer's completed Product Declaration Form
132	Other programs approved by USGBC

133 134 135 136 137 138	Product Manufacturer Supply Chain Optimization: Submit documentation from manufacturers for products that go beyond material ingredient optimization as follows:  No GreenScreen Benchmark 1 materials Cradle to cradle gold or platinum certification REACH Other programs approved by USGBC
139 140	Product Certificates and Test Reports: For each type of sprayed fire-resistive material, signed by product manufacturer, indicating compliance with performance requirements;
141 142 143	Submit test reports based on evaluation of comprehensive tests performed by a qualified testing agency, for proposed fireproofing.  Submit test reports showing compliance with ASTM E1513 for cementitious content of fireproofing.
144	Manufacturer Letter: Verifying that the UL Designs selected for the project are not load restricted.
145 146 147	Engineering Judgment: Copies of engineering judgment review, signed by the applied fireproofing manufacturer's professional fire safety Engineer, licensed to practice in the jurisdiction of the Project, and approval by local authorities having jurisdiction for fireproofing applications for which no UL tested design is available.
148	Compatibility and adhesion test reports: From fireproofing manufacturer indicating the following:
149 150 151 152 153	Materials have been tested for bond with substrates.  Materials have been verified by fireproofing manufacturer to be compatible with substrate primers and coatings.  Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
154 155 156	Product Test Reports: Indicate that physical properties of proposed sprayed fire resistive materials comply with specified requirements based on evaluation of comprehensive tests performed by a qualified testing agency, for proposed fireproofing.
157 158	Independent laboratory test reports of physical properties U.L. Test Reports.
159 160	Research and Evaluation Reports: For sprayed fire-resistive material, from ICC-ES or other agency acceptable to the [NY City ] <insert jurisdiction="">Building Department.</insert>
161	Preconstruction Test Reports: For fire protection.
162	Field quality-control and special inspection reports.
163	Warranties: Samples of special warranties specified in this Section.
164	QUALITY ASSURANCE
165 166 167 168	Installer Qualifications: A firm or individual with at least five (5) years successful experience in application of type of fireproofing specified and certified, licensed, or otherwise qualified by sprayed fire-resistive material manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements.
169 170 171 172	Submit detailed listing of five most current projects with location, names, and telephone numbers of Owner, Architect, and General Contractor.  A manufacturer's willingness to sell it's fireproofing to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.

- Regulatory Requirements: Conform to the applicable building code requirements of all authorities have jurisdiction.
  Products, execution, and sprayed fire-resistive material thicknesses shall conform to the applicable code requirements for the required fire resistance ratings.
- Degree of Restraint: Provide sprayed fire-resistive materials for restrained criteria as defined in ASTM E119, Appendix X3; unless otherwise designated on drawings.
- [ICC International Building Code, 2012 Edition] [local code insert here].
- Mockups: Build mockups [to verify selections made under Sample submittals and to demonstrate aesthetic effects]
  [to set quality standards for materials and execution] [and] [for preconstruction testing].
- Build mockup of [each type of fire protection and different substrate] [and] [each required finish] <Insert description> as shown on Drawings.
- Extent of Mockups: Approximately 100 sq. ft. of surface for each product indicated to be review by the
  Architect. The mock-up installation will be at the site, at a location as mutually agreed upon by the
  Architect and the Applicator. Include in sample application typical columns, truss, beams, girders and
  decking if specified to be fireproofed. Provide material finishes complying with project requirements as
  to density and finish where exposed to view. Notify the Architect 48 hours I advance of mock-up review.
  Do not proceed with work until review of mock-up sample has been completed by the Architect.
- Do not proceed with work until review of mock-up sample has been completed by the Architect.

  After review of the mockup, its location will be recorded and it will be retained and used as a sta
- After review of the mockup, its location will be recorded and it will be retained and used as a standard of quality for the remainder of the fireproofing application.
- The Architect's review of the mock-up sample installation will be for final acceptance of material finish appearance, conformance with design and general quality does not relieve the applicator from the responsibility and conformance with all specified requirements.
- Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

### PRECONSTRUCTION TESTING

196

197

198

203

204

205

206 207

- Preconstruction Testing Service: [Owner will engage] [Engage] a qualified testing agency to perform preconstruction testing on [field mockups of] fire protection.
- Provide test specimens and assemblies representative of proposed materials and construction.

  Applied fire-resistive materials are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
  - Testing is performed on specimens of applied fire-resistive materials that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, tamping, troweling, rolling, and water overspray, if any of these are used in final application.
  - Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.
- Preconstruction Adhesion and Compatibility Testing: Engage a qualified testing and inspection agency to test for compliance with requirements for specified performance and test methods.
- Bond Strength: Test for cohesive and adhesive strength according to ASTM E736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
- Density: Test for density according to ASTM E605. Provide density indicated in referenced fireresistance design, but not less than minimum specified in Part 2.
- Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with sprayed fire-resistive material.
- Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
- For materials failing tests, obtain sprayed fire-resistive material manufacturer's written instructions for corrective measures including the use of specially formulated bonding agents or primers.

#### 222 FIELD CONDITIONS

- 223 Environmental Limitations: Do not apply fire protection when ambient or substrate temperature is 44 deg F or lower
- 224 unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before,
- 225 during, and for 24 hours after product application.
- 226 Ventilation: Ventilate building spaces during and after application of fire protection, providing complete air
- 227 exchanges according to manufacturer's written instructions; introducing fresh air and exhausting air continuously
- 228 during and 24 hours after application to maintain nontoxic, unpolluted, safe working area. Use natural means or, if
- 229 they are inadequate, forced-air circulation until fire protection dries thoroughly. Provide temporary enclosures to
- 230 prevent spray from contaminating air
- 231 Protect adjacent surfaces and equipment from damage by overspray, fall out and dusting off of sprayed
- materials. 232

235

- Provide fire extinguisher and post caution signs warning against smoking and open flame when working 233
- 234 with flammable materials.

## DELIVERY, STORAGE, AND HANDLING

- 236 Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels
- identifying product and manufacturer, date of manufacture, shelf life if applicable, and fire-resistance ratings 237
- applicable to Project. 238
- 239 Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose
- 240 shelf life has expired.
- 241 Store materials inside, under cover, aboveground, and kept dry until ready for use. Remove from Project site and
- 242 discard wet or deteriorated materials.

#### 243 COORDINATION

- 244 Sequence and coordinate application of fireproofing with other related work specified in other Sections to comply
- 245 with the following requirements:
- 246 Provide temporary enclosure as required to confine spraying operations and protect the environment.
- 247 Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation. 248
- Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during 249
- construction operations subsequent to its application. 250
- Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been 251
- completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal 252 roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying 253
- 254 of fire-resistive material.
- 255 Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been 256 completed.
- 257 Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items
- 258 penetrating fire protection are in place.
- 259
- Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
- 260
- Do not install enclosing or concealing construction until after fire-resistive material has been applied, 261
- inspected, and tested and corrections have been made to defective applications. 262
- Apply fireproofing after field touch up of shop primed steel and field priming of connections prior to 263
- 264 application of fireproofing for steel that is located below the flood elevation.

265	WARRANTY
266 267 268	Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace fire-resistive materials that fail in materials or workmanship within specified warranty period.
269	Failures include, but are not limited to, the following:
270 271	Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of fireproofing from substrates.
272	Warranty Period: Five (5) years from date of Substantial Completion.
273	PRODUCTS
274	PERFORMANCE REQUIREMENTS
275 276 277	Assemblies: Provide applied fire protection, including auxiliary materials, identical to those tested according to requirements of each fire-resistance design, inspecting organizations acceptable to authorities having jurisdiction and manufacturer's written instructions.
278 279	Regional Materials: Provide a minimum of 20 percent of building materials (by cost) that are regionally extracted, processed and manufactured materials within a radius of 100 miles.
280 281	Recycled Content: Building materials shall have an averaged recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content for Project constitutes the following percentages of material:
282 283	Applied Fireproofing: 100% [note: 100% recycled content is not available on the west coast in any type of fireproofing]
284	Source Limitations: Obtain fire protection[ for each fire-resistance design] from single source.
285 286 287 288 289 290	Thickness and Density: ASTM E605, thickness and density as required by UL test to attain the fire endurance rating shown or as required by governing authorities for the application shown. Thickness shown is the minimum thickness required solely to determine clearances and, in case of conflict, the fire endurance rating prevails. For structural members of sizes not included in the UL beam and column designs, calculate the required fireproofing thickness in accordance with the equation listed in the UL "Fire Resistance Directory" for adjustment of applied protection material thickness.
291 292 293 294	Fire-Test-Response Characteristics: Provide fireproofing with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify bags containing fireproofing with appropriate markings of applicable testing and inspecting agency.
295 296 297 298	Fire-Resistance Design: Indicated by design designations from UL's "Fire Resistance Directory or from the listings of another testing and inspection agency acceptable to authorities having jurisdiction, for fireproofing serving as direct applied protection, tested according to ASTM E119 or UL 263; testing by a qualified testing agency.
299 300 301	Surface-Burning Characteristics: ASTM E84.  Identify products with appropriate markings of applicable testing agency.  Steel members are to be considered restrained unless specifically noted otherwise.
302 303 304	UL design listings shall state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor are not allowed.

305 306 307	<u>VOC Content</u> : For field applications, verify coatings comply with VOC content limits of authorities having jurisdiction and the following VOC content limits, when calculated according to 40 CFR59, Subpart D (EPA Method 24):
308 309	Flat Paints and Coatings: 50 g/L. Nonflat Paints and Coatings: 50 g/L.  Primary Scalars and Undergotory: 100 g/L.
310 311	Primers, Sealers, and Undercoaters: 100 g/L. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
312 313 314	Low-Emitting Materials: For field applications, verify coatings comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
315 316	Asbestos: Provide products containing no detectable asbestos, as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."
317	Dry mix sprayed fire resistive materials containing mineral fibers are not allowed.
318 319 320 321 322	Engineering Judgment: For those fireproofing applications shown for which no UL tested design is available through a manufacturer, an engineering judgment signed and sealed by the applied fireproofing manufacturer's Professional Fire Safety Engineer, licensed to practice in the Project State, derived from similar UL system designs or other tests is to be obtained and submitted to local authorities having jurisdiction for their review and approval prior to installation. Submit documentation to substantiate such review and approval.
323	INTERIOR SPRAYED FIRE-RESISTIVE MATERIALS
324 325 326 327 328	Low Rise Durability, Light Density SFRM ( <b>FP-01</b> ): For Buildings where the last occupied floor is less than 75 ft. above lowest level of fire department vehicle access. Provide light density sprayed fire resistive materials, complying with ASTM E1513; Manufacturer's standard, factory-mixed, gypsum binders, additives, and lightweight aggregates, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and for interior concealed [ <b>and interior exposed</b> ] application.
329	Products: Subject to compliance with requirements, provide one of the following:
330 331 332 333 334	Carboline Company; a subsidiary of RPM International; Pyrolite 15.  Grace Construction Products; W.R. Grace & Co Conn.; Grace Construction Products;  Monokote MK-6 Series.  Isolatek International; Cafco 300 Series.  Southwest Fireproofing Products Co.; Type 5GP.
335 336 337	Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
338 339 340 341 342 343	Bond Strength: Minimum 150-lbf/sq. ft. (7.18-kPa) cohesive and adhesive strength based on field testing according to ASTM E736.  Dry Density: Not less than 15 lb/cu. ft. (240 kg/cu. m) values for average densities, as required to attain fire-resistance ratings indicated, per ASTM E605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."  Thickness: As required for fire-resistance design indicated, measured according to requirements of
344 345 346 347 348 349 350	fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch (9 mm). Where the referenced fire-resistance design lists a thickness of 1 inch (25 mm) or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch (6 mm). Where the referenced fire-resistance design lists a thickness of less than 1 inch (25 mm) but more than 0.375 inch (9 mm), the minimum allowable individual thickness of SFRM is the greater of 0.375 inch (9 mm) or 75 percent of the design thickness.

351 352	No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft. (240 kg/cu. m).
332	resistance radings were established at defisities of less than 13 to/ed. It. (240 kg/ed. III).
353	Combustion Characteristics: ASTM E136.
354	Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.
355	Identify products with appropriate markings of applicable testing agency.
356	Flame-Spread Index: 10 or less.
357	Smoke-Developed Index: 0 or less.
	•
358	Compressive Strength: Minimum 20 lbf/sq. in. according to ASTM E761. Minimum thickness of
359	SFRM tested shall be 0.75 inch (19 mm) and minimum dry density shall be as specified but not
360	less than 15 lb/cu. ft. (240 kg/cu. m).
361	Corrosion Resistance: No evidence of corrosion according to ASTM E937.
362	Deflection: No cracking, spalling, or delamination according to ASTM E759.
363	Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.
364	Air Erosion: Maximum weight loss of 0.0215 g/sq. ft. in 24 hours according to ASTM E859. For
365	laboratory tests, minimum thickness of SFRM is 0.75 inch (19 mm), maximum dry density is 15
366	lb/cu. ft. (240 kg/cu. m), test specimens are not prepurged by mechanically induced air velocities,
367	and tests are terminated after 24 hours.
368	Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result
369	in no growth on specimens per ASTM G21 or rating of 10 according to ASTM D3274 when tested
370	according to ASTM D3273.
371	Sound Absorption: [NRC] [or] [SAA] of [0.50 to 0.75] [0.60 to 0.70] [0.65 to 0.75] [not less
372	than 0.60] <insert or="" range="" single="" value=""> according to ASTM C423 for Type A mounting</insert>
373	according to ASTM E795.
374	Finish: Spray-textured finish for concealed application] [and <b>Rolled, spray-textured finish</b> ] [and
375	Skip-troweled finish with corner beads] for interior exposed application.[ Apply separate,
376	colored topcoat after finishing.]
377	Color: [As indicated by manufacturer's designations] [Match Architect's sample] <insert color="">.</insert>
378	Highrise Durability, Medium Density Cementitious SFRM (FP-02): For buildings where the last occupiable floor is
379	less than 420 ft. and more than 75 ft. above lowest level of fire department vehicle access, provide medium density

Density: Not less than 22 psf density and as specified in the approved fire-resistance design, according to ASTM E605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method.".
382 383 384 385 386 387 388 389 390 391 392 393 394 395 396 397 398	cementitious fireproofing complying with ASTM E1513 throughout, consisting of factory-mixed, dry formulation of Portland cement or gypsum binder, additives, and lightweight aggregates mixed with water at Project site to form a slurry or mortar before conveyance and application in interior concealed [and interior exposed] applications.  Products: Subject to compliance with requirements, provide one of the following:  Carboline Company; a subsidiary of RPM International; Pyrocrete 239 or Type 5 MD.  GCP Applied Technologies Inc.; Grace Construction Products; Monokote Z106/HY, Monokote MK-10B. or Monokote Z-106G.  Isolatek International; Cafco 400. Southwest Fireproofing Products Co.; Type 7GP.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:  Bond Strength: Minimum 430-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 22 psf density and as specified in the approved fire-resistance design, according to ASTM E605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method.".  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch.
382 383 384 385 386 387 388 389 390 391 392 393 394 395 396 397	cementitious fireproofing complying with ASTM E1513 throughout, consisting of factory-mixed, dry formulation of Portland cement or gypsum binder, additives, and lightweight aggregates mixed with water at Project site to form a slurry or mortar before conveyance and application in interior concealed [and interior exposed ]applications.  Products: Subject to compliance with requirements, provide one of the following:  Carboline Company; a subsidiary of RPM International; Pyrocrete 239 or Type 5 MD.  GCP Applied Technologies Inc.; Grace Construction Products; Monokote Z106/HY, Monokote MK-10B. or Monokote Z-106G.  Isolatek International; Cafco 400.  Southwest Fireproofing Products Co.; Type 7GP.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:  Bond Strength: Minimum 430-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 22 psf density and as specified in the approved fire-resistance design, according to ASTM E605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method.".  Thickness: As required for fire-resistance design indicated, measured according to requirements of

401 402 403 404 405	Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of SFRM is the greater of 0.375 inch or 75 percent of the design thickness.  No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 22 psi.
406 407 408	Combustion Characteristics: ASTM E136. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
409 410	Flame-Spread Index: 2 or less. Smoke-Developed Index: 2.5 or less.
411 412 413 414 415 416 417 418	Compressive Strength: Minimum 100 lbf/sq. in. according to ASTM E761.  Corrosion Resistance: No evidence of corrosion according to ASTM E937.  Deflection: No cracking, spalling, or delamination according to ASTM E759.  Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.  Air Erosion: Maximum weight loss of 0.0215 g/sq. ft. in 24 hours according to ASTM E859.  Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 according to ASTM D3274 when tested according to ASTM D3273.
419 420 421 422 423 424	Sound Absorption: [NRC] [or] [SAA] of [0.50 to 0.75] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.60] <insert or="" range="" single="" value=""> according to ASTM C423 for Type A mounting according to ASTM E795.  Finish: Spray-textured finish for concealed application [and Rolled, spray-textured finish] [ and Skiptroweled finish] [and Skiptroweled finish with corner beads] for exposed applications. [Apply separate, colored topcoat after finishing.]</insert>
425	Color: [As indicated by manufacturer's designations] [Match Architect's sample] <insert color="">.</insert>
426 427 428 429 430	Highrise Durability, Medium Density Cementitious SFRM ( <b>FP-03</b> ): For buildings where the last occupiable floor is greater than 420 ft. above lowest level of fire department vehicle access, provide medium density cementitious fireproofing complying with ASTM E1513 throughout, consisting of factory-mixed, dry formulation of Portland cement binder, additives, and lightweight aggregates mixed with water at Project site to form a slurry or mortar before conveyance and application in interior concealed [and interior exposed] applications.
431	<u>Products:</u> Subject to compliance with requirements, provide one of the following:
432 433 434 435	Carboline Company; a subsidiary of RPM International; Pyrocrete 239.  GCP Applied Technologies Inc.; Grace Construction Products; Monokote Z106/HY.  Isolatek International; Cafco 400.  Southwest Fireproofing Products Co.; Type 7GP.
436 437 438	Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
439 440 441 442 443 444	Bond Strength: Minimum 1000-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 22 psf density and as specified in the approved fire-resistance design, according to ASTM E605.  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch.
445 446 447 448 449	Where the referenced fire-resistance design lists a thickness of 1 inch or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of SFRM is the greater of 0.375 inch or 75 percent of the design thickness.

450 451	No reduction in average thickness is permitted for those fire-resistance designs whose fire-
451	resistance ratings were established at densities of less than 22 psi.
452	Combustion Characteristics: ASTM E136.

Combustion Characteristics: ASTM E136.
482 483 484 485 486 487 488 489 490 491 492 493 494 495 496	Construction Products; Monokote Z146T.  Isolatek International; Fendolite M-II. Southwest Fireproofing Products Co Type 7HD.  Application: Provide formulations designated for exterior use, listed and labeled by a qualified testing and inspecting agency acceptable to authorities having jurisdiction.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:  Bond Strength: Minimum 7,000-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 40 pcf density and as specified in the approved fire-resistance design, according to ASTM E605.  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch. Combustion Characteristics: ASTM E136.  Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.
482 483 484 485 486 487 488 489 490 491 492 493 494 495 496 497	Construction Products; Monokote Z146T.  Isolatek International; Fendolite M-II. Southwest Fireproofing Products Co Type 7HD.  Application: Provide formulations designated for exterior use, listed and labeled by a qualified testing and inspecting agency acceptable to authorities having jurisdiction.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:  Bond Strength: Minimum 7,000-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 40 pcf density and as specified in the approved fire-resistance design, according to ASTM E605.  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch.  Combustion Characteristics: ASTM E136.  Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
482 483 484 485 486 487 488 489 490 491 492 493 494 495 496	Construction Products; Monokote Z146T.  Isolatek International; Fendolite M-II. Southwest Fireproofing Products Co Type 7HD.  Application: Provide formulations designated for exterior use, listed and labeled by a qualified testing and inspecting agency acceptable to authorities having jurisdiction.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:  Bond Strength: Minimum 7,000-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 40 pcf density and as specified in the approved fire-resistance design, according to ASTM E605.  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch. Combustion Characteristics: ASTM E136.  Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.

500 501 502 503 504 505 506 507 508 509 510	Compressive Strength: Minimum 300 lbf/sq. in. according to ASTM E761.  Corrosion Resistance: No evidence of corrosion according to ASTM E937.  Deflection: No cracking, spalling, or delamination according to ASTM E759.  Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.  Air Erosion: Maximum weight loss of 0.0215 g/sq. ft. in 24 hours according to ASTM E859.  Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 according to ASTM D3274 when tested according to ASTM D3273.  Finish: [Spray-textured finish] [Rolled, spray-textured finish] [Skip-troweled finish] [Skip-troweled finish with corner beads]. [Apply separate, colored topcoat after finishing.]  Color: [As indicated by manufacturer's designations] [Match Architect's sample] <insert color="">.</insert>
511 512 513 514 515	Exposed Hi-Abuse Resistant Cementitious SFRM ( <b>FP- 05</b> ): For exterior exposed applications and interior applications subject to high abuse or damage, provide high density spray applied fire resistive materials complying with ASTM E1513, factory-mixed, lightweight, cement aggregate formulation; chloride free formulation of Portland cement binders, additives and inorganic aggregates mixed with water at Project site to form a slurry or mortar before conveyance and application.
516	Products: Subject to compliance with requirements, provide one of the following:
517 518 519	Carboline Company; a subsidiary of RPM International; Pyrocrete 241 or Pyrocrete 241 HD.  GCP Applied Technologies Inc.; Grace Construction Products; Monokote Z156 or Grace Construction Products; Monokote Z156T.
520 521 522 523 524	Application: Provide formulations designated for exterior use, listed and labeled by a qualified testing and inspecting agency acceptable to authorities having jurisdiction.  Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
525 526 527 528 529 530 531 532 533	Bond Strength: Minimum 20,000-lbf/sq. ft. cohesive and adhesive strength based on field testing according to ASTM E736.  Density: Not less than 50 pcf density and as specified in the approved fire-resistance design, according to ASTM E605.  Thickness: As required for fire-resistance design indicated, measured according to requirements of fire-resistance design or ASTM E605, whichever is thicker, but not less than 0.375 inch. Combustion Characteristics: ASTM E136.  Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
534 535	Flame-Spread Index: 0 or less. Smoke-Developed Index: 10 or less.
536 537 538 539 540 541 542 543 544 545	Compressive Strength: Minimum 453 lbf/sq. in. according to ASTM E761.  Corrosion Resistance: No evidence of corrosion according to ASTM E937.  Deflection: No cracking, spalling, or delamination according to ASTM E759.  Effect of Impact on Bonding: No cracking, spalling, or delamination according to ASTM E760.  Air Erosion: Maximum weight loss of 0.000 g/sq. ft. in 24 hours according to ASTM E859.  Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 according to ASTM D3274 when tested according to ASTM D3273.  Finish: [Spray-textured finish] [Rolled, spray-textured finish] [Skip-troweled finish] [Skip-troweled finish] [Skip-troweled finish] [Skip-troweled finish]
546	Color: [As indicated by manufacturer's designations] [Match Architect's sample] <insert color="">.</insert>

547	AUXILIARY MATERIALS
548 549 550	General: Provide auxiliary materials that are compatible with sprayed fire-resistive material and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
551 552 553	Substrate Primers: : Ensure that paint on steel surfaces will not impair proper adhesion. Obtain determination of compatibility of paint or primer with spray fireproofing from spray fireproofing manufacturer. Primers approved by sprayed fire-resistive material manufacturer and complying with one or both of the following requirements:
554 555 556 557 558 559	Primer and substrate are identical to those tested per ASTM E119 in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Primer's bond strength in required fire-resistance design complies with specified bond strength for sprayed fire-resistive material and with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests according to ASTM E736.
560 561 562	Bonding Agent: Product approved by sprayed fire-resistive material manufacturer and complying with requirements in UL's "Fire Resistance Directory" or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
563 564 565 566	Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, according to fire-resistance designs indicated and sprayed fire-resistive material manufacturer's written instructions. Include clips lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.
567 568	Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by sprayed fire-resistive material manufacturer.
569 570 571	Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by sprayed fire-resistive material manufacturer. Include pins and attachment.
572 573	Sealer: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
574	Products: Subject to compliance with requirements, provide the following:
575	Isolatek International; [Cafco Bond-Seal Type EBS][Cafco Bond-Seal Type X].
576 577	Topcoat: Suitable for application over sprayed fire-resistive material; of type recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
578 579	Cement-Based Topcoat: Factory-mixed, cementitious hard-coat formulation for trowel or spray application over SFRM.
580	<u>Products:</u> Subject to compliance with requirements, provide one of the following:
581 582	<u>Carboline Company; a subsidiary of RPM International;</u> Pyrocrete Hardcoat 4500. <u>Isolatek International;</u> [Fendolite M-II][Fendolite TG].
583 584 585	Water-Based Permeable Topcoat: Factory-mixed formulation for brush, roller, or spray application over applied SFRM. Provide application at a rate of [30 sq. ft./gal.] [60 sq. ft./gal.] [120 sq. ft./gal.] <insert value="">.</insert>
586	Products: Subject to compliance with requirements, provide the following:
587	Isolatek International: Cafco Ton-Coat

### 589 **EXAMINATION** 590 Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates 591 and other conditions affecting performance of the Work and according to each fire-resistance design. Verify 592 compliance with the following: 593 Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, 594 incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of 595 fire protection with substrates under conditions of normal use or fire exposure. Objects penetrating fire protection, including clips, hangers, support sleeves, and similar items, are 596 securely attached to substrates. 597 598 Where these items are installed after application of spray fireproofing, return to the site and apply 599 additional spray fireproofing to maintain fire rating of items to be fireproofed. 600 Substrates receiving fire protection are not obstructed by ducts, piping, equipment, or other suspended 601 construction that will interfere with fire protection application. 602 Concrete work on steel deck is complete before beginning Work. 603 Roof construction, installation of rooftop HVAC equipment, and other related work are complete before 604 beginning Work. 605 Conduct tests according to sprayed fire-resistive material manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond. 606 607 Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work. 608 Proceed with installation only after unsatisfactory conditions have been corrected. 609 **PREPARATION** 610 Cover other work subject to damage from fallout or overspray of fire protection materials during application. 611 Clean substrates of substances that could impair bond of fire protection material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants. 612 Prime substrates where included in fire-resistance design and where recommended in writing by sprayed fire-613 614 resistive material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection. 615 616 For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fire protection. Remove minor projections and fill voids 617 that would telegraph through fire-resistive products after application. 618 619 APPLICATION 620 Construct fire protection assemblies that are identical to fire-resistance ratings required and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, rate of application, accelerator use, 621 622 tamping, troweling, water overspray, finishing, and other materials and procedures affecting fire protection Work. 623 Comply with sprayed fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fire protection, as applicable to particular 624 conditions of installation and as required to achieve fire-resistance ratings indicated. 625 626 Coordinate application of fire protection with other construction to minimize need to cut or remove fire protection.

588

**EXECUTION** 

627	Do not begin applying fire protection until clips, hangers, supports, sleeves, and other items penetrating
628	fire protection are in place.
629	Defer installing ducts, piping, and other items that would interfere with applying fire protection until
630	application of fire protection is completed.
631	Where items are attached to steel members to be spray fireproofed, and adjoining cross sectional area of
632	items is greater than 4.65 inches square per 3 ft. or per linear meter, extend spray fireproofing over
633	adjoining member a minimum of 18 inches in order to maintain fire resistance per UL requirements.
634	Metal Decks:
635	Do not apply fire protection to underside of metal deck substrates until concrete topping, if any, is
636	completed.
637	Do not apply fire protection to underside of metal roof deck until roofing is completed; prohibit roof
638	traffic during application and drying of fire protection.
639	Install auxiliary materials as required, as detailed, and according to fire-resistance design and sprayed fire-resistive
640	material manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use
641	attachment and anchorage devices of type recommended in writing by sprayed fire-resistive material manufacturer.
642	Spray apply fire protection to maximum extent possible. After the spraying operation in each area, complete the
643	coverage by trowel application or other placement method recommended in writing by sprayed fire-resistive
644	material manufacturer.
645	Extend fire protection in full thickness over entire area of each substrate to be protected.
646	Install body of fire protection in a single course unless otherwise recommended in writing by sprayed fire-resistive
647	material manufacturer.
<i>c</i> 10	For applications are a paragraph to taking landwing land days (most removal) an appropriate apply fine protection
648 649	For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fire protection that differs in color from that of encapsulant over which it is applied.
<i>(5</i> 0	
650 651	Where sealers are used, apply products that are tinted to differentiate them from fire protection over which they are applied.
652	Mask off adjoining surfaces not scheduled to receive sealer and apply sealer evenly.
032	wask off adjoining surfaces not scheduled to receive sealer and appry sealer evenity.
653	Install metal lath and reinforcing fabric, as required, to comply with fire-resistance ratings and fire-resistive material
654	manufacturer's written recommendations for conditions of exposure and intended use. Securely attach lath and
655	fabric to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage
656	devices of type recommended in writing by fireproofing manufacturer. Attach accessories where indicated or
657	required for secure attachment of lath and fabric to substrate.
658	Masking and Filling of Voids
659	Apply applied fireproofing to beams and girders under steel decking or concrete slabs that will be
660	exposed in the finished construction so as to provide a minimum of two-inch coverage of the deck beyond
661	the limits of the top flange of beam or girder. Accomplish by masking the portions of decking or slab not
662	to be covered so as to provide straight lines parallel to the flanges.
663	Completely fill voids between metal deck ribs directly above the upper edge of steel beams or girders
664	running perpendicular to the ribs with applied fireproofing or other approved method to achieve the
665	required hourly protection of the upper flanges of beams and girders.
666	Coat substrates with bonding adhesive before applying fire-resistive material where required to achieve fire-
667	resistance rating or as recommended in writing by fireproofing manufacturer for material and application indicated.
668	Apply fireproofing over clips, fasteners, attachments, outriggers and other fastenings required to support
669	construction from steel that requires fireproofing. Encapsulate fastenings and extend fireproofing a min. of 12

670 671	inches onto surfaces of attached metal components. Thickness of fireproofing shall match assembly rating of steel that element is attached to.
672 673	Provide a uniform finish complying with description indicated for each type of fire protection material and matching finish approved for required mockups.
674	Cure fire protection according to sprayed fire-resistive material manufacturer's written instructions.
675 676	Do not install enclosing or concealing construction until after fire protection has been applied, inspected, and tested and corrections have been made to deficient applications.
677 678	Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
679	Apply topcoat to spray fireproofing [where indicated].
680	Repair or replace work that has not successfully protected steel.
681	APPLICATION, CONCEALED FIREPROOFING
682 683 684	Apply concealed fireproofing in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition but apply in greater thicknesses and densities if specified in Part 2 "Concealed Fireproofing" Article.
685	Finishes: Apply concealed fireproofing to produce the following finishes:
686	Spray-Textured Finish: Finish left as spray applied with no further treatment.
687	APPLICATION, EXPOSED FIREPROOFING
688 689	Apply exposed fireproofing in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition but apply in greater thicknesses and densities if indicated.
690 691 692 693 694 695	Surfaces that will be exposed in the finished construction, including the top surfaces of bottom flanges of beams, shall be given a smooth troweled finish and shall be free of all bumps, drips and sags. Provide corner beads at exposed corners of trowel applied finishes to finish edges. Securely attach lath and fabric to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by fireproofing manufacturer. Attach accessories where indicated or required for secure attachment of lath and fabric to substrate.
696 697	Provide a uniform finish complying with description indicated for each type of material and matching Architect's sample or, if none, finish approved for field-erected mockup.
698	Finishes: Where indicated, apply fire protection to produce the following finishes:
699 700 701 702 703 704 705 706	Spray-Textured Finish: Finish left as spray applied with no further treatment.  Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.  Skip-Troweled Finish: Even leveled surface produced by troweling spray-applied finish to smooth out the texture and neaten edges.  Skip-Troweled Finish with Corner Beads: Even, leveled surface produced by troweling spray-applied finish to smooth out the texture, eliminate surface markings, and square off edges.  Smooth, troweled finish with surface markings eliminated and edges squared.
707	FIELD QUALITY CONTROL

Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

709 710 711	Test and inspect as required by [the IBC][the applicable building code][, Subsection 1704.13, "Sprayed Fire-Resistant Materials."][New York City Building Code 1704.11 ][, as indicated on Schedule of Special Inspections.]
712 713 714 715	Testing and Inspections: The Work shall be tested and inspected as completed Work in successive stages; using methods and following areas of extent specified. Do not proceed with application of fire protection for the next area until test results for previously completed applications of fire protection show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
716 717 718 719 720	Thickness for Floor, Roof, and Wall Assemblies: Determined in accordance with ASTM E605, taking an average of not less than four measurements for each 1,000 sf, or partial area, on each floor, from a 144-sq. in. sample area, with sample width of not less than 6 inches.  Thickness for Structural Frame Members: Determined in accordance with ASTM E605, testing shall be performed on not less than 25 percent of the structural members per floor
721 722 723	Beams and Girders: Taking and average of 9 thickness measurements at a single cross section Joists and Trusses: Taking an average of 7 thickness measurements of a single cross section Columns: taking an average of 12 thickness measurements of a single cross section.
724 725 726 727 728	Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency of not less than one sample for every 2,500 sf or part thereof of each type of construction and structural framing member, per ASTM E605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method." Bond Strength: Test samples in accordance with ASTM E736, to determine the cohesive/adhesive bond strength of members as follows
729 730 731 732 733	Floors, Roofs, Walls: At the rate of not less than one sample of each floor, roof and wall assembly for every [2,500 sf][10,000 sf] or part thereof of sprayed area in each story Structural Framing Members: At the rate of not less than one sample from each structural framing member (beam, girder, joist truss and column) for each [2,500 sf][10,000sf] of floor area, or part thereof in each story.
734 735	Field test fireproofing that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
736 737	If surfaces of structural steel receiving fireproofing are primed or otherwise painted or coated, perform a series of bond tests specified in UL's "Fire Resistance Directory."
738 739 740 741	Verify that minimum bond strength of 80% and a minimum individual bond strength of 50% is maintained when compared to the bond strength of fire resistive coatings applied to clean uncoated steel.  The minimum bond strength of 150 per for low rise will not be reduced.
742 743	The minimum bond strength of 150 pcf for low rise will not be reduced.  Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. minimum per ASTM E736.
744	Minimum thickness of sprayed fire-resistive material tested in laboratory shall be 0.75 inch.
745 746 747 748	The testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.  If testing finds applications of fireproofing are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.
749	Fire protection will be considered defective if it does not pass tests and inspections.
750	Remove and replace fire protection that does not pass tests and inspections, and retest.
751 752	Apply additional fire protection, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.
753	Repair or replace SFRM at all test areas, and within area(s) where test results indicate SFRM does not comply with
754	requirements, at no additional cost to the Authority. Repair or replace to match existing

755 Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or 756 additional work with specified requirements. 757 Prepare test and inspection reports. 758 **CLEANING** 759 Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling. 760 761 **PROTECTION** 762 Protect fire protection, according to advice of manufacturer and Installer, from damage resulting from construction 763 operations or other causes, so fire protection is without damage or deterioration at time of Substantial Completion. Coordinate application of fireproofing with other construction to minimize need to cut or remove fire protection. 764 765 **REPAIRS** 766 As installation of other construction proceeds, inspect fire protection and repair damaged areas and fire protection 767 removed due to work of other trades. 768 Repair fire protection damaged by other work before concealing it with other construction. Repair fire protection by reapplying it using same method as original installation or using manufacturer's 769 recommended trowel-applied product. 770

Provide patching and repairing of sprayed fireproofing damaged by other trades after application under the work for

this section. Costs for such repair and patching will be borne by the trade or Subcontractor or Contractor causing the

damage. The General Contractor is to coordinate the costs of repair work between the Subcontractors or Contractors

for this repair and patch work with no additional cost to the Owner for such work

775 END OF SECTION
